RESULTS ACHIEVED

- ✓ Improved project visibility
- ✓ Centralized data access
- ✓ Standardized workflows across teams
- ✓ Accelerated technology adoption

ABOUT LMC CONSTRUCTION

Established in 2004, LMC Construction is a Pacific Northwest-based, employee-owned general contractor specializing in affordable and market-rate housing. The company partners with nonprofits and developers across Oregon and Washington to deliver both new construction and renovation projects. With a diverse portfolio that includes multifamily communities and commercial buildings, LMC Construction is recognized for its collaborative approach, construction expertise, and commitment to quality.

Discover how LMC Construction transformed its operations by transitioning to Autodesk Construction Cloud.

Enhance project management, and building a scalable foundation with expert implementation and training support from ARKANCE.

Identifying the Need for Change: Challenges with Previous Systems

LMC Construction had been using a major competitor's platform for eight years but found it increasingly restrictive, particularly in integrating financials with their ERP systems. The previous platform offered limited customization, which hindered the ability to tailor workflows to specific project needs.

Additionally, the renewal process felt more transactional than collaborative, further reinforcing the need to explore alternative solutions that could offer greater adaptability, transparency, and long-term value.

“The previous platform’s limited customization was a significant roadblock, especially for financial integrations.”

Bryan Bilicke
Director of Information Technology
LMC Construction

Transition to Autodesk: A Transformative Solution

The decision to switch to Autodesk was driven by its potential for customization and seamless integration with LMC's existing ERP systems. Autodesk's openness to extended trials allowed LMC to thoroughly evaluate its features before committing. Unlike its predecessor, Autodesk offered various packages that could be tailored to LMC's specific needs, particularly in financial management and workflow customization. The ability to see individual cost items rather than aggregated amounts provided greater transparency and control over project budgets.

Forging Strong Partnerships: The Role of ARKANCE

The successful implementation of Autodesk at LMC Construction was supported by ARKANCE, who was recommended directly by Autodesk for their implementation and training expertise. The ARKANCE team played a critical role in helping LMC Construction set up the system and learn how to use it effectively.

Training and Support

Adopting Autodesk required extensive customization, particularly on the financial side. LMC found the training provided by ARKANACE, a recommended partner by Autodesk, invaluable. The training process was comprehensive and included sessions on mobile app usage, templates for admin training, and cost management support. This enabled LMC to not only configure the system to their needs but also to create internal training materials for ongoing education.

“We’re able to customize and update the system as often as we need, with no hassle.”

Bryan Bilicke

Director of Information Technology
LMC Construction

“The ability to customize and receive tailored training was pivotal in our successful transition to Autodesk.”

Bryan Bilicke

Director of Information Technology
LMC Construction

Continuing the Momentum

LMC’s partnership with ARKANACE has been instrumental in maximizing the effectiveness of Autodesk. The collaboration has been described as strategic and consultative, allowing LMC to leverage ARKANACE’s expertise for ongoing system enhancements. As Autodesk continues to evolve, LMC remains committed to leveraging new features and functionalities, positioning themselves for sustained growth and success.

A Foundation for Long-Term Success

LMC Construction’s story demonstrates the powerful impact the right technology and strategic support can have on operational performance. The switch not only resolved previous limitations but also established a framework for continuous improvement and scalability. With expert guidance from ARKANACE, LMC is well-positioned to scale its processes, embrace innovation, and continue delivering high-quality construction outcomes across every project.
